

Syafino Yunalfian

Champaign, IL

syafino2@illinois.edu | +1 (312) 383 9339 | [linkedin.com/in/syafino-yunalfian](https://www.linkedin.com/in/syafino-yunalfian) | github.com/syafino

Education

University of Illinois at Urbana-Champaign

Bachelor of Science in Computer Science & Statistics

May 2027

GPA: 3.88/4.00

Relevant Courseworks: Applied Machine Learning, Text-Information Systems, Database Systems, Computer Systems, Data Structures & Algorithms, Linear Algebra, Intro to Computer Science Series, Discrete Math, Computer Prog, Calculus

Technical Skills

Programming: Java, Python, TypeScript/JavaScript, SQL, NoSQL(MongoDB & Neo4j), C/C++

AI/ML: PyTorch, TensorFlow, NumPy, Pandas, Scikit-learn, OpenCV, LangGraph, NLP, Claude Code, Codex

Backend, Cloud & Systems: Node.js, FastAPI/Flask, Docker, Git, PostgreSQL, PostGIS, Redis, Celery, REST API Design, Async Python, Linux, GCP, AWS, QDrant, Pinecone, Supabase

Web & Mobile: React.js, React Native, Flutter, HTML/CSS, MQTT, Raspberry Pi

Experience

Elara Health, Inc

AI Engineer Internship

May 2026 - Aug 2026

San Francisco, CA

- Built record-replay automation loops with AI fallback for healthcare portal workflows, connecting carry-set handoff, chain mapping, and loop runner logic across Availity, Integra CUE, and Modio
- Developed eligibility classifiers and error-handling logic to distinguish found, not-found, and portal-error states, allowing workflows to traverse payer candidates without premature aborts
- Designed and tested UI + workflow controls for long-running automation, including traversal history, editable candidate lists, terminal result screens, and stop controls for AI-assisted runs

Garg Research Group | University of Illinois at Urbana-Champaign

Software Engineer & Automation Research Assistant

Sep 2025 – May 2026

Champaign, IL

- Built and deployed full-stack automation software for a device that reduced cement R3 reactivity test time from 7 days to 30 minutes using React.js, Node.js, PostgreSQL, and Python.
- Integrated Raspberry Pi with real-time camera analysis (OpenCV), automated data acquisition, and Wi-Fi provisioning through a custom hotspot interface.
- Deployed GCP Cloud SQL for experiment data management, enabling MQTT-based device communication and secure user tracking via GUI. Deployed Frontend via Vercel.

Agentic AI @ UIUC

Vice President, AI Systems Lead Dev

Jan 2026 - May 2026

Champaign, IL

- Built a domain-specific RAG pipeline (LangChain, Qdrant, PubMedBERT, BGE) for clinically grounded, source-traceable LLM responses
- Developed a multi-agent system with a patient simulation agent and automated scheduling, backed by persistent user context
- Optimized inference with Groq for near-instant, zero-cost, high-throughput healthcare queries

Projects

Text-to-SQL Agent | Python, PostgreSQL, sqlglot, Docker, LLM

Oct 2025 - Dec 2025

- Built a sandboxed SQL-evaluation framework (safety, syntax, schema, logic) with pre-execution hallucination checks and reproducible Dockerized Postgres environments
- Implemented multi-dimensional scoring, automated error taxonomy, fast fixture loading (COPY), and web/CLI interfaces for observable, testable agent evaluations
- Awarded **2nd place – Berkeley AgentX Hackathon (40,000+ participants)**

Physical World Scarcity Terminal (PWST) | Python, FastAPI, Streamlit, PostGIS, Celery, Redis, Docker

Feb 2026

- Engineered a distributed async data pipeline ingesting 8+ external APIs with Pydantic validation and PostGIS time-series storage for anomaly detection **planned with Gemini 3.2 Thinking**
- Designed Celery + Redis task queue system for automated data refresh and continuous risk evaluation
- Built FastAPI backend with real-time event-correlation logic combining market data and NLP sentiment analysis (VADER) for infrastructure risk monitoring through news with **Claude Code**
